

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

2. Once the problem is identified, the next step is to define the objectives and goals of the project. This helps to clarify what needs to be achieved and provides a clear direction for the team.

3. The third step is to develop a plan or strategy to address the problem. This involves breaking down the problem into smaller, manageable tasks and determining the resources needed to complete each task.

4. The fourth step is to implement the plan. This involves putting the strategy into action and monitoring progress to ensure that the project is on track.

5. The final step is to evaluate the results of the project. This involves assessing the outcomes against the objectives and goals and identifying any areas for improvement.

PREFACE.

FOR the first time in the history of the Australian Wool Trade a work has been issued giving an Alphabetical Classification of Wool Marks, the Grower's Name and Address, and the Pastoral District in which his sheep station is situated. Little aid, in some quarters, has hitherto been given to the buyer desirous of further knowledge respecting the districts in which suitable wools were grown. Memorising thousands of marks is a task of exceptional difficulty, so the Publisher trusts that this work will lighten the labours of all interested in the Wool Trade during the strenuous period of the auction sales. The European manufacturer, ever desirous of improvement, can also at leisure study the advantages resulting from knowing the pastoral district in which his favourite wools are grown—some districts being celebrated for the uniform excellence of their wool. On the other hand, pastoralists, honoured for the excellence of their flocks, the careful production and honest packing of their wool, may meet with due reward in a wider field.

SECTION II. comprises Wool Brands which the Compiler could not trace to the Grower. Some are good station brands; but others include dealers' mixed lots, speculative lots, and scoured lots of unknown origin.
